Summary

It all started with a simple curiosity back in 2021. I was browsing the web when I stumbled upon a beautifully designed website. I was intrigued by how it worked and how the different elements came together to create a seamless user experience. I decided to dig deeper and discovered the world of web development. It felt like a puzzle waiting to be solved, and I was determined to unlock its secrets. I started with the basics, tinkering with colored texts, animated elements, inputs, and lists using HTML & CSS. As I experimented and explored, I uncovered the foundations of web development and realized that I wanted to dive deeper.

I enrolled in the Computer Science program at Ivane Javakhishvili Tbilisi State University in 2021 and learned the fundamentals of programming languages, object-oriented programming, data structures, algorithms, and more. But that was just the beginning.

I knew that if I wanted to excel in this field, I needed to continuously learn and grow beyond the classroom. So, I delved into independent studies and explored various technologies such as TypeScript, JavaScript, React.js and others. To put my newfound knowledge to the test, I completed practical assignments on various platforms such as HackerRank, SoloLearn, FreeCodeCamp, and more. Each challenge I conquered gave me a sense of accomplishment and fueled my drive to learn more.

Skills

Programming Fundamentals & OOP

C, C++, Java, C#, PHP, JavaScript, TypeScript, Python.

React Js, Material UI, Styled Components, HTML, CSS, Scss/Sass, Git.

Education

Ivane Javakhishvili Tbilisi State University

2021-2025

Sophomore in Computer Science

Programing fundamentals
OOP
Data structure
Algorithms
Computer Organization and Architecture

Interests

Reading, travelling, swimming, hiking, watching movies, playing musical instruments, fishing

Languages

Georgian
English (B2)
Spanish (A1)
